

Multi Diver Evo Automatic submersible pump

Model: 1000,

Model
1000
1200

Information:

- Submersible, automatic - pressure pump
- Suitable for rainwater - dirty water
- Capacity up to 105 l/min, lifting height: 35-45 m

Full product description

Multi Diver EVO 1000/1200 Pump Automat

Automatic submersible pump for rainwater

Automatic submersible pump, which does not require the installation of an additional pressure switch and a hydrophore tank. In order to start the pump, connect a hose with a garden gun, place the pump in the well (suspend the pump so as not to expose it to clogging with silt from the bottom of the well), and then put the cable in the network. Each time, the pump will turn on automatically (as a result of pressure drop) and when we finish work, it will turn off automatically.

Main advantages of the Multi Diver EVO Automat

- does not require a pressure hydrophore tank
- no pressure switch required
- does not require a cooling jacket
- light weight and dimensions
- express commissioning (no installer intervention required)

Technical data:

Pump model	Q _{max} capacity [l/min]	H _{max} lifting height [m]	P Engine power [kW]	U voltage [V]	I current [A]	RP-Q pressure output [ca]	H Pump height [mm]	A Pump diameter [mm]	Pump weight [kg]
Multi Diver 1000 EVO	105	35	0,85	230	4	1"	515	150	10,2
Multi Diver 1200 EVO	105	45	1,1	230	5	1"	535	150	11,2
